The 3/4 AR500 Steel targets are suitable for the use of heavy caliber rifles whether it's with a handgun or rifle, regular target shooting helps law enforcement, army members, security personnel, competing shooters and even sharp weekend recreational plinkers and maintain their shooting abilities. Choosing the right type of target plays an important role in practice shooting in terms of safety, skill and pleasure. [+] Read more AR500 steel is a wear-resistant abrasion that has a Brinell 500 hardness rating. Available from only a handful of steel plants worldwide, high-quality certified AR500 steel materials are materials preferred for steel purposes because of its ability to withstand frequent hits of high speed, large caliber handguns and rifle pellets. Depending on the thickness of the steel shooting target, the calibre and type of ammunition in use and the distance between the shooter and the target, the AR500 steel targets can be expected to last for a very long time. There are some metal shooting targets available that sell for just a few dollars. They are usually made of non-standard materials, and most will be useless and possibly even unsafe after hitting 50 or fewer times. Steel-made shooting targets with a brinell hardness rating of less than 400 prone to pocking, cratering and public deformation, which affect their integrity, shorten their useful lives and can create a safety threat to the shooter and any nearby observer. These metal shooting targets should be avoided and only shooting targets made with high-quality hardened steel should be used for practice. Steel targets made of temperate steel with Brinell hardness number (BHN) AR500 or higher are known to sustain more than 10,000 views. Spartan Armor system™ carries a full line of AR500 steel targets for sale which is made of the same high quality steel that is used in our core steel body armor. Reactive versus fixed steel shooting targets can also be a lot of fun, and especially when reactive steel targets are used. When hit, reactive AR500 steel targets will clang, rotate, tumble or turn. Unlike paper or other single-use purposes, the AR500 steel targets will not grind or extend the residue, which makes cleaning quick and easy. AR500 steel targets can also be reused several times. When safely anchored and positioned at a 20 degree downward angle, the splatter that results from striking hard steel target bullets will be diverted down and away from the shooter. But a safe distance must also be maintained between the shooter and a steel target. The It will vary, depending on the caliber of the bullet, the type of jacket, the weight and speed of the muzzle. As a general instruction, safe distances to shoot at 3/8 steel targets are at least 15 yards for most handguns and 100 yards or more for non-armor noisy round rifles up to .30-06 caliber traveling at less than 2,700 fps. Spartan Armor System carries the full selection of reactive and fixed AR500 steel targets. They can be both fully assembled (welded) and commissioned in kit versions (without support) for DIYers. Sold under the Spartan Target man™ brand, examples of our AR500 steel targets include the Heads Up model and the Target Tree Duel, which are also available in the version made of AR550 steel. We additionally carry a wide selection of AR550 steel target replacement components and additives. For more information about Spartan Armor AR500 Steel Targets System, check out this blog from our archives. Find your shooting targets with Spartan Armor Systems to learn more about Spartan's ARMOR SYSTEMS AR500 Steel Shooting Targets, Body Armor or any of our other quality products, contact us at 520-396-3335 or contact us online. Transportation is always free, and military personnel, law enforcement officers and first responders receive a 10% discount on all Spartan products. Steel targets are what we do, here in our rogue shooting targets are literally tons of steel targets in stocks just about everyone. You may choose to buy only the steel gong so you can stand your hanger or. We also stand our steel target and steel target holders and even kits that both stand the target and aim the steel so when it arrives, you can start shooting. Our AR500 and AR550 targets add a new experience to the shooting target. With immediate feedback, Target Steel will let the shooter know instant satisfaction if they hit their mark with both visual and audio confirmation. Even in a quick series of shots the shooter will know whether they are hit or missed, unlike other target types. Hearing the kick on your target over the long haul is very exciting and you spend less time inspecting targets and more shooting time. Metal targets have other advantages over traditional paper or cardboard targets when shooting in unfavorable conditions, as it is largely not affected by rain or wind. All of our targets can be welded on both sides as there are no braces welded, allowing the shooter to get maximum use of the targets and not worry with broken molds. Our targets are made to last thousands of rounds when used with proper cartridges. A common question now is the day is why ar550 steel? Don't most target steel manufacturers use ar500? Yes, and yes. In order to explain we needed to return on time when steel targets were primarily out of T-1 steel, it was because it was the best material readily available for use. With the evolution of time on the material went on we had a better new option, it was the AR500 and it worked way better than T-1 steel but still had issues with one The most popular cartridge used, 5.56, was AR500 materials at closer range and caused pits because of the high speed of projectiles, which may be a big concern if you're shooting .17 Remington or 22-250 but 5.56 is probably the most widely used cartridge in the world. Law enforcement agencies, military, competitive 3-gun shooter not to mention public recreational shooter, they all love there AR 15 rifles and they're more in room 5.56, so what should you do? Along came the next generation of materials and it solved the long-term problem with the goals of pit steel, it is ar550 and it works well. Our steel plates are all 100% internal laser cut AR500 or better, they are not plasma cutting to maintain steel characteristics. After laser cutting targets they are washed in solvent to remove the oil. They carry no color allowing you to paint any color you choose or not paint at all, some shooters prefer just oil and shoot. After painting, the bullet kick will mark the target by blowing the color, just re-coloring and reuse. All of our target pages are designed to be used with both handguns and rifles. 1/2 AR500 Gong Steel 1/2 Gong Steel 2 to 15. \$24.95-\$126.95 3/8 AR550 Gong Steel 3/8 Gong Steel 2-20. \$20.90-\$159.95 3/8 AR550 Square Steel 3/8 Square Targets 8x8 to 24x 24. We have 3/8 square target plates .530 square hole cutters to fit 1/2 hard carriage screws used in our heavy duty tension holder or our t-hangers. They also have holes in the top corners to allow hanging as a gong plate with chains or the like. \$39.95-\$229.95 3/8 AR550 Targets 3 Pack 3 Package Pricing for us Selected 3/8 Gong Steel Goals and 3/8 Square Steel Goals. \$75.95-\$169.95 3/8 AR550 Steel Tension Mount Targets 3/8 Tension Mount Targets .530 Square Hole Cutter fits the hard 1/2 screw carriage used in our heavy duty tension holder.
